

Cyber Range Lab 3 - Incident Response & Reporting

Objective:

Train students to identify attacks via log analysis.

Required Equipment:

Server Pi with Apache logs, Terminal access, and Dashboard access.

Steps:

1. Inspect Recent Log Entries

```
sudo tail -n 20 /var/log/apache2/access.log
```

Look for: SQL keywords, Script tags, Suspicious parameters, and Repeated requests from the same IP

2. Identify Suspicious Activity

Examples:

```
select * from
```

```
' OR '1'='1
```

```
<script>alert(1)</script>
```

3. Write the Incident Report

Create: incident_report.md

Include: Time of event, request line(s), why they are suspicious, potential impact, and how firewall policies helped

4. Award Points

```
curl -X POST http://10.0.0.30:8080/score/team1/5
```

Check Your Work:

Include screenshots of log snippet and updated dashboard scores.

Reflection Question:

What clues suggested a request was malicious, and how did firewall rules help limit the damage?
